

There is more to *IT Project Management* than just working in the computer room configuring servers. Real life projects require real life solutions. From upgrading MS Exchange to designing and implementing a company's intranet site, you can have confident the job will be right the first time and on budget.

Real Life IT Project: Drafting Upgrade

A manufacturing company has a drafting department using outdated software. Not only are they having capability issues with their customer, the drafting department is becoming a bottle-neck in the job order flow. They have reservations about upgrading. Will the current hardware run the new software? Will current drawing macros need to be re-written? How much training will be required and at what cost? Will a network software license help cut costs? Can additional capability be added to the drafting software to improve efficiency?

Solution: Call Willis Consulting of York

Willis Consulting has been through drafting software migration and upgrades and has the experience to address all your needs. You will receive best practice options such as hardware configurations, memory requirements, video card compatibility, third party add-ins and additional information such as scanners, plotters and folders. From concept through full operations, we have you covered.
