

## Project Management

There is more to *Project Management* than tracking tasks and resources. Real life projects require an understanding of the technology used in industry. Industry's high tech projects require an understanding of many disciplines, from linear motion to hydraulics and fluid flow. Your project will be addressed with the big picture in mind down to the smallest details.

### Real Life Project: Shocktube

*A testing laboratory needs to build a one of a kind piece of test equipment that produces a Mach 10 shockwave. The project involves physics, design engineering, mechanical and electrical engineering, hydraulics as well as high gas pressures. The project needs to be completed in a timely manner, within budget and such that the operation is as efficient as possible.*

### Solution: Call Willis Consulting of York

*Willis Consulting has experience in project management ranging from small mock-ups to large scale projects. Willis incorporated talents from many of York local industries: Pierce Welding and Manufacturing, York Industries, Commonwealth Supply Company, RG Group, Allentown Valve and Fitting, McDal Corporation, Hydra-tight Bolting Systems, National Instruments, and many more. From concept through full operations, we have you covered.*

- Technical Project Management
- Outsourcing
- Concept CAD Drawings
- Hydraulics Design
- Gas Flow Control
- Fluid Flow
- Temperature
- Pressure
- Strain Gauging
- Linear Motion
- Data Acquisition
- Manufacturing
- Chrome Plating
- Computer Driven Machinery
- Control Systems
- Ultrasonics
- Radiography
- Call for more Details!
